

## Abstract

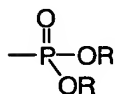

## (Problems)

Providing a polymer, a composition and a molded article, which are inexpensive and have great chemical stability and high mechanical strength with no content of halogen elements and less environmental burden during disposal.

## (Means for Resolution)

A copolymer containing at least two or more polymer segments, where at least one polymer segment contains a phosphoryl derivative represented by the following general formula (1) and at least one polymer segment never contains a phosphoryl derivative represented by the following general formula (1):

(1)

(where R independently represents hydrocarbon, an aromatic ring, hydrogen, a metal ion or onium ion).
